### **Preface**

This publication was prepared by the Office of Highway Information Management, Federal Highway Administration. It provides a general historical summary of information dealing with highways, their use, and their financing, thus bringing under one cover a comprehensive statistical review of highway development in the United States through 1995. The information presented in this volume supplements and, in some instances, supersedes similar data presented in the five earlier Highway Statistics Summary publications. Included are statistical and analytical tables of general interest on motor fuel, motor vehicles, driver licensing, highway-user taxation, Federal aid for highways; State and local highway finance, and highway mileage and usage characteristics. A listing of the data is given in the table of contents and a brief description is given in the text accompanying each section.

Each section in this publication includes information for 1995 (except that local government finance data end with 1994) and each has been carried back as far as possible, the earliest year being dependent on the availability or relevancy of information. Where not otherwise apparent, data for Alaska and Hawaii are included in summaries for 1959 and subsequent years.

The data presented have been obtained largely from Federal and State annual reports, and through the cooperative efforts of Federal, State, and local officials, particularly those of the State highway agencies.

Within the limited space offered by a single volume of this size, only the most widely used data could be presented. The Internet version of this Summary will contain additional data as it becomes available. Tabular series concentrated on current rather than historical data are found in Highway Statistics, published annually since 1945. Most of the earlier editions are out of print. Limited quantities of this edition and the 1995 Highway Statistics are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402:

### INTRODUCTION

his publication brings together summaries of selected statistical tabulations relating to highway transportation in three major areas: (1) highway use--the ownership and operation of motor vehicles; (2) highway finance--the receipts and expenditures for highways by public agencies; and (3) the highway plant--the extent, characteristics, and performance of the public highways, roads, and streets in the Nation.

The arrangement of contents follows this general order, with the first three sections devoted to motor-fuel use and taxation, vehicle ownership, and driver licensing. The fourth section deals with financing of highways by all government agencies; the fifth section provides data on highway mileage and performance; and the sixth section gives statistics for the U.S. Territories and the Commonwealth of Puerto Rico.

Statistics in this publication have been analyzed and reported using procedures that provide comparability of values among States. Therefore, some values reported here may differ from values reported by other agencies for similar items.

The cooperation of Federal, State, and local agencies in providing the basic data from which these statistical series are derived is acknowledged and greatly appreciated.

While the Office of Highway Information Management is responsible for the preparation of this publication, a number of the statistical summaries are prepared by other units within the Federal Highway Administration (FHWA) as indicated by notes on the tables involved.

Responsibility for administering the highway network of the United States, providing funds for its continued improvement and maintenance, and regulating its use is a complex affair involving Federal and State agencies, together with nearly 39,000 county, township, and municipal governments and, to a limited degree, the private sector. These agencies work in concert in many ways in the management of the Nation's highway plant.

### FEDERAL AGENCIES

The FHWA is the principal highway agency of the Federal Government. Under the Federal-aid highway program, the initiative for selecting routes eligible for improvement with Federal-aid funds rests with the States. These routes continue to remain under the jurisdiction of the State or local governments which are responsible for administering and maintaining them as part of the State or local highway systems.

The Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) created the National Highway System (NHS) and

other Federal-aid highway categories. The congressional approval of the final system occurred on November 28, 1995.

The FHWA also administers the Federal Lands Highways Program. This program is funded from the Federal Highway Trust Fund and consists of three separate programs: Park Roads and Parkways, Indian Reservation Roads, and Public Lands Highways.

The Department of Defense and the Bureau of Land Management in the Department of the Interior provide funds for the construction of roads leading to military installations, timber areas, etc., but these funds are usually transferred to the FHWA to manage the construction program.

Some Federal agencies also provide funds for road and bridge work which is incidental to their major functions. For example, the Corps of Engineers in the Department of the Army and the Bureau of Reclamation in the Department of the Interior expend funds for highway and bridge construction and reconstruction on projects involving water resources and navigable rivers. Other Federal agencies, such as the Forest Service and the Bureau of Land Management, provide funds through a policy of sharing with States and counties some of the income derived from timber sales and oil and mineral royalties on Federal lands, a portion of which is placed in road funds.

Additional Federal funds are provided from the General Treasury to States, counties, and cities through the programs of other Federal agencies such as Urban Development Block Grants for various purposes including highways. The different Federal assistance programs for highways are summarized in the FHWA publication, *Highway Taxes and Fees, How They Are Collected and Distributed*, table F-106.

The Treasury Department's Internal Revenue Service collects the Federal road-user taxes and deposits the revenues in the Federal Highway Trust Fund. Amounts dedicated by Congress for mass transportation are credited to a separate mass transit account.

### STATE AGENCIES

In the FHWA's analyses, special State commissions and authorities, both toll and nontoll, as well as State highway and transportation departments, are classified as State highway agencies. Other executive branches of State governments also have been included when, and to the extent, they are responsible for the collection and distribution of road-user taxes or perform highway and related functions. Examples of these executive agencies are treasury and revenue departments, motor-vehicle departments, public-safety departments (highway police and law enforcement activities), and conservation

departments when they are responsible for roads within State parks, forests, or reservations. The District of Columbia is treated as a State.

### LOCAL GOVERNMENTS

Local governments include: counties, townships, and municipalities. Included with local governments are subordinate agencies, road districts, commissions, and authorities, both toll and nontoll.

All States have organized county governments except Connecticut and Rhode Island. Counties, however, have limited or no responsibility for roads in the New England States, or in Delaware, North Carolina, Virginia (with some exceptions), and West Virginia. In Alabama and Maryland, the State has assumed responsibility for roads in certain counties. Counties are called parishes in Louisiana, boroughs in Alaska, municipios in Puerto Rico, and townships are known as towns in New England, New York, and Wisconsin.

A municipality is a political subdivision where a municipal corporation has been established to provide general local government for a specific population concentration in a specified area. Some counties have boundaries coextensive with cities. Generally, these counties retain their identities only for certain administrative purposes. Because some counties are entirely urban in nature or have merged with municipalities, they are classified as municipalities. A county may also be classified as a municipality when its area consists predominantly of incorporated cities, towns, and villages.

Although generally considered to be rural governments, many townships, particularly in the Northeast, serve heavily populated areas and perform the functions of a municipal government.

### **URBAN AREAS**

The term "urban" is used in the summary tables to denote the Federal-aid legislation definition of an area. Such areas include, at a minimum, a census place with an urban population of 5,000 to 49,999 or a designated urbanized area with a population of 50,000 or more (or portions thereof within State boundaries). The Federal-aid boundaries are fixed by responsible State and local officials, subject to the approval of the Secretary of Transportation. These Federal-aid urban areas may extend beyond incorporated (with some exceptions) and census boundaries, and thus are not necessarily coextensive with municipal boundaries.

### **DUPLICATIONS**

Users of these data must be careful to avoid "double counting" of the statistical data that could result from the effect of intergovernmental relationships. This is particularly so with reference to tables in the finance and mileage sections, because of the overlapping of Federal-aid activities with the State and local highway activities, and the effects of grant-inaid programs. Examples are Federal-aid payments, which are in turn reported as State receipts and included in State expenditures; and Federal-aid highway system mileage, which are parts of the State and/or local highway systems, and are also included in those systems. Summary tables that give national statistics have been included at the beginning of the finance and mileage sections, and eliminate "double counting" or duplication. These are then followed by table series that reflect the transactions of each level of government, but which are not necessarily cumulative to national totals.

The following (Table SSS-200) is a summary of the more requested data items brought together in one table for your convenience.

### IMPORTANT INFORMATION For Users of *Highway Statistics*

### **Purpose of Information**

The Federal Highway Administration (FHWA) collects from the States and publishes in Highway Statistics information necessary to support its responsibilities to the Congress and the public. This information is used in the development of highway legislation at both the Federal and State levels. The information is also used in preparing legislatively required reports to Congress, in calculating and evaluating Federal fund apportionments, in keeping State governments informed, and, in general, as an aid to highway planning, programming, budgeting, forecasting, and fiscal management. It is also used extensively in the evaluation of Federal, State, and local highway programs. From an FHWA perspective, the information in Highway Statistics meets the Federal need of providing a national perspective on highway program activities very well. Since this information was developed primarily to meet FHWA and State needs in administering the Nation's highway programs, other users need to exercise thoughtful care in using this information for other purposes.

### **Quality Considerations**

Information published in *Highway Statistics* comes from a number of sources. These sources include various administrative agencies within the 50 States, over 30,000 units of local government, the FHWA, other Federal agencies, and the five U.S. territories.

Information included in *Highway Statistics* is the result of a cooperative effort between the FHWA and the States. Nearly all of the data provided to FHWA, including the Highway Performance Monitoring System (HPMS) data, come through State Departments of Transportation from existing data bases or business records of many individual State and local governmental agencies, including metropolitan planning agencies (MPOs). The existing data bases and record keeping systems of these governmental units were designed and are maintained to meet their individual business needs.

Data quality and consistency of information published in *Highway Statistics* are, therefore, dependent upon the programs, actions and maintenance of sound data bases by numerous data collectors, manipulators and suppliers at the State, local and metropolitan area levels. In general, specific data items that are used by the collecting agency are likely to be of better quality than data items which are collected solely for the FHWA. Data quality and consistency are also dependent upon the nature of the individual data items and how difficult they are to define, collect, etc.

HPMS data are collected in accordance with the Highway Performance Monitoring System Field Manual for the Continuing Analytical and Statistical Database. This document contains standard codes for the various data items to be reported in a consistent format.

Highway statistical data other than the HPMS are collected in accordance with A Guide to Reporting Highway Statistics (the Guide). Reporting procedures contained in the Guide are not rigid standards; rather, they represent a reporting reference system that the FHWA recommends the States use in collecting and reporting State and local highway data to the FHWA.

Nearly all of the State reported data are analyzed by FHWA for consistency and for adherence to reporting guidelines. In a number of cases, data are adjusted to improve consistency and uniformity among the States. The analysis and adjustment process is accomplished in close working relationship with the States supplying the data.

### **Using Data for Comparisons**

Even when data are consistently collected and reported, users need to recognize that highway statistical information is not necessarily comparable across all States or from year to year for a particular State. For many of the data items reported in *Highway Statistics*, a user should not expect to find consistency among all States, due to many State to State differences. When making State level comparisons, it is inappropriate to use these statistics without recognizing those differences that impact comparability.

Use of reported State maintenance expenditures provides a clear example. Maintenance expenditures per mile can vary between States depending upon a number of factors including differences such as climate and geography, how each State defines maintenance versus capital expenditures, traffic intensity and percent trucks, degree of urbanization, types of pavement being maintained, and the level of system responsibility retained by the State versus that given to other levels of government. It would be inappropriate, therefore, when using data from *Highway Statistics* to compare per mile maintenance costs across all States to draw any conclusions without taking into account the differences that should be expected in these parameters based upon differing State conditions.

If choosing to compare State data, the user must be prepared to thoughtfully select a set of peer States that have similar characteristics in relationship to the specific comparison being made. Improperly selected peer States are likely to yield invalid data comparisons.

Differences that the user needs to consider in determining suitability of peer States for data comparison purposes include characteristics such as urban/rural similarities, population density, degree of urbanization, climate, geography, differing State laws and practices that influence data definitions, administrative control of the public road system, similarity of the basic State economies, traffic volume similarities, and the degree of State functional centralization.

To facilitate the selection of peer States for possible comparative purposes, a table listing a number of data items which might be considered follows this discussion. Most of these data items are available in other tables in *Highway Statistics*, but are included here for the user's convenience. Finally, additional special considerations that the user should be aware of in using the information in *Highway Statistics* are included in the discussion that precedes each of the individual data sections.

In examining the trends over time for a particular State, the user needs to be aware of any special circumstances that would effect the suitability of trend line comparisons. Hurricanes, blizzards, earthquakes and floods are examples of natural disasters that cause changes in expenditures and funding priorities during the year of the event and in subsequent years. A State's construction season is directly affected by climate conditions with a severe winter restricting the length of the construction season. The initiation or completion of a major construction project changes a number of data trends that could be examined. The user needs to consider how changes in materials, technology, inflation, and a number of other factors affect a State's trend lines.

### SELECTED MEASURES FOR IDENTIFYING PEER STATES

### Section I

### **MOTOR FUEL**

The tables in this section show the volume of motor fuel used for highway and nonhighway purposes. The term "motor fuel" applies to gasoline and all other fuels, including special fuels, coming under the purview of the State motor-fuel tax laws. "Special fuels" include diesel fuel and, to the extent they can be quantified, liquefied petroleum gases such as propane. Gasohol, a blend of gasoline and fuel alcohol, is included with gasoline in all motor fuel tables in this section.

In some instances, revisions or corrections have been made in previously published data; consequently, the figures shown supersede those in Highway Statistics Summaries 1945, 1955, 1965, 1975, and 1985.

### **MOTOR-FUEL FINANCING**

The first tax on gasoline was adopted by the Oregon Legislature in 1919 to raise revenues for the maintenance of State highways. By 1929, all States were imposing a tax on gasoline and three years later a one-cent-per-gallon Federal tax was enacted as part of the Revenue Act of 1932.

By 1986, diesel fuel was taxed by all of the States. In some States, diesel fuel is taxed at a higher rate than gasoline mainly because of the greater fuel efficiency achieved by diesel powered vehicles.

Table MF-205 gives a history of the motor-fuel tax rates of the States and Federal government since the adoption of the first tax in 1919.

The weighted average State motor-fuel tax for gasoline has increased from 3.35 cents per gallon in 1930, the first full year in which were collected in all States to 18.5 cents in 1995. At the end of 1995, the Federal tax was 18.4 cents per gallon for gasoline and 24.4 cents per gallon for diesel. Both gasoline and diesel rates include 4.3 cents per gallon for Federal deficit reduction.

Many States derive a small additional income from permits for motor-fuel distributors, dealers, and users; pump licence fees; fines and penalties etc. but in most instances, these imposts produce only enough income to meet the costs of collection and administration. State motor-fuel tax revenues during the period 1919-1995 are recorded in Table MF-201 by national totals. Refunds paid, non-highway gasoline tax receipts (principally aviation and marine use) dedicated to the pertinent facilities, and other miscellaneous receipts are shown separately. Table MF-201A shows net gallonage receipts ( after refunds and non-highway gasoline dedications), miscellaneous receipts, and net total receipts on a State-by-State basis.

### **MOTOR-FUEL USE**

Motor-fuel gallonage taxed by the States is given in Table MF-202. This table provides tax-related data for revenue analysis and shows gallonage taxed, or fully refunded whether or not the fuel was used on the highway. The amount of motor-fuel used for highway and non-highway purposes regardless of tax treatment is shown in tables MF-221, MF-224T, MF-225, and MF-226. Table MF-233GLA shows gasohol sales, by State, for those States that were able to report data separately from gasoline for the years 1980-1992. Table MF-233E shows estimated use of gasohol for 1993-1995. (Gasohol is defined as any blend of motor gasoline and ethanol of which 10 percent or more of the product is ethanol.)

### INFORMATION FOR USERS

The records of State agencies that administer the State taxes on motor fuel are the underlying source for most of the data presented in these tables. The FHWA estimates highway use of gasoline by subtracting estimated nonhighway use from the total use reported by the States.

Over the last several years, there have been numerous changes in State fuel tax laws and procedures that have resulted in improved fuel tax compliance, especially for diesel fuel. The improved compliance has resulted in increased fuel volumes being reported by the States to FHWA. The trends shown in the tables reflect both improvements in tax compliance and changes in consumption. More information on fuel tax compliance issues may be found in *The Joint Federal/State Motor Fuel Tax Compliance Project Fiscal Year 1994 Midyear Report*.

### Section II

### **MOTOR VEHICLES**

### Registrations

registration of all motor vehicles. By 1915 all States had a registration law, but it was not until 1921 that annual registration was required by all States. In addition to providing regulatory control over the rapidly increasing number of motor vehicles, the States soon found that registration taxes and license fees provided a major source of revenue for highway purposes. Until 1929, this source provided the major share of revenue derived from highway users.

The year in which the first registration law was enacted in each State and the type of registration (whether permanent or recurrent) is given in table MV-230.

The annual vehicle registration data varies among the States. Although many States continue to register specific vehicle types on a calendar year basis, all States use some form of the "staggered" system to register motor vehicles. The "staggered" system permits a distribution of the renewal workload throughout all months. Most States allow preregistration or permit "grace periods" to better distribute the annual registration workload.

In order to present vehicle registration data uniformly for all States, the information is shown as nearly as possible on a calendar-year basis. Insofar as possible, the registrations reported exclude transfers and reregistrations and any other factors that could otherwise result in duplication in the vehicle counts.

A diversity of registration practices exists among the States. In general, motor vehicles are classified as automobiles, buses, and trucks. Motorcycles, motorscooters, and motor bicycles are not classified as motor vehicles; nor does the general term "motor vehicle" include trailers and semitrailers.

Registration practices for commercial vehicles differ greatly among the States. Some States register a tractor-semitrailer combination as a single unit; others register the tractor and the semitrailer separately. Regardless of how they were registered, only the power units have been included in the truck count. Some States register buses with trucks or automobiles. These and other major differences have made it necessary to supplement the data submitted by the States with information obtained from special studies and other sources. Table MV-200 records registrations of automobiles, buses, and trucks by years since 1900. Table MV-201 shows registrations classified by vehicle types, by States for each year since 1900. Prior to 1985, the automobile category included personal passenger vans, passenger minivans, and utility-type vehicles.

Beginning with the 1985 data, these vehicles are included with trucks.

The truck category includes light trucks to the extent they can be identified and separated from automobiles. Although the detail of motor-vehicle data has improved in recent years, it is not yet possible to obtain from all States separate data on single-unit trucks and combinations. Some States provide data for light trucks and truck tractors, but for many States, the FHWA estimates this information using other data sources, such as the Truck Inventory and Use Survey conducted by the Bureau of the Census. Table VM-201A, found in the Roadway Extent, Characteristics, and Performance Section, estimates, by vehicle type, the amount of national travel, the number of highway vehicles registered, and the total gallonage of fuel consumed on the highways.

### **Motor vehicle revenues**

The tremendous growth of the motor-vehicle population after the turn of the century made itself felt in the mounting pressure to obtain better roads. The available revenues from property taxes and other sources were then inadequate to meet the highway demands. New revenues were needed, and the imposition of motor-vehicle taxes resulted. Table MV-202, found in the Highway Finance Section, records receipts from motor-vehicle registration fees and associated license and permit fees as well as special taxes and fees levied on carriers for hire since 1921. A detailed classification of receipts is not available for years prior to 1934, but classes of taxes and fees have been segregated beginning with that year.

The diversity of taxes and fees collected has made it necessary to group them into broad general classes, the most important being registration fees. The amounts shown are those collected solely as highway-user revenues and do not include any amounts, such as personal property levies, that are derived from taxes other than those related to motor-vehicle ownership and operation. (Although portions of these revenues are later used in some States for nonhighway purposes, it is the source rather than the expenditure of the revenues that has determined their inclusion here.) Motor-vehicle registration fee schedules (table MV-103) and administrative provisions governing the disposition of State motor-vehicle and motor-carrier receipts (table MV-106) appear in a separate FHWA publication entitled Highway Taxes and Fees, How They Are Collected and Distributed.

### **Use of Data**

All State reported data are analyzed by FHWA for completeness, reasonableness, consistency, and compliance with data

Text Motor Vehicles

reporting instructions contained in A Guide to Reporting Highway Statistics. State reported data is adjusted if necessary to eliminate mistakes and to improve data uniformity among the States. The analysis and adjustment process is accomplished in cooperation with the States supplying the data.

The FHWA data include all vehicles which have been registered at any time throughout the calendar year. As such, data include vehicles which were retired during the year and vehicles that were registered in more than one State. In some States, it is also possible that contrary to the FHWA reporting instructions, vehicles which have been registered twice in the same State may be reported as two vehicles.

### Section III

### **DRIVER LICENSING**

ach State and the District of Columbia administers its own driver licensing system. Since 1954 all States have required drivers to be licensed, and since 1959 all States have required examination prior to licensing. Tests of knowledge of State driving laws and practices, vision, and driving proficiency are now required for new licensees. A summary of State driver licensing requirements is given in a separate publication, *Driver License Administration Requirements and Fees*, published biennially. There is also a companion publication entitled *State and Provincial Licensing System Comparative Data* that may be obtained from the American Association of Motor Vehicle Administrators, 4301 Wilson Blvd, Suite 400, Arlington, VA 22203.

### LICENSED DRIVERS

Table DL-230 shows the year in which driver licensing laws were established in each State.

Table DL-201 shows the total number of licensed drivers in each State since 1949.

Table DL-220 displays the number of male and female licensed drivers by sex and age group. This data starts at 1963.

### **USE OF DATA**

In 1990 (Highway Statistics 1989), a strict standard was established to determine the number of unrestricted drivers under the age of 16 on the road. This new rule stated that a driver must be able to drive inclusively between the hours of 5:00 A.M. and 12 Midnight without another licensed driver in the vehicle. Since this new standard cut the number of drivers from 1988 to 1995 approximately 60% in the "under 16" category, one must keep this in mind when comparing the data from earlier years.

**Driver Licensing** Table DL-230

### YEAR OF FIRST STATE DRIVER LICENSE LAW AND FIRST DRIVER EXAMINATION

**APRIL 1997** TABLE DL-230

| STATE                              | DRIVER LICENSE LAW 1/ | DRIVER LICENSE EXAMINATION 2/ |

### **Highway Finance**

This section chronicles the financing of highways, roads and streets by Federal, State and local governments. The tables in this section show highway funding, disbursements, debt status, and other financial information. Highway finance data begins with the last decade of the nineteenth century and are for differing time periods.

The tables are arranged by level of government, starting with a series that summarizes the combined highway finance activities of all units of government. A series of tables follow for the individual levels of government, i.e., Federal, State, and local.

### **Historical Perspective**

The roads that were built in the early days of this country were vastly different from the highways that are constructed and maintained today. The nature and scope of highway programs and their financing have changed over time as has the highway user from the pre motor-vehicle era to the era of the motor vehicle.

State involvement in road building was limited until the 1890's and the formation of State highway departments. In the late 1700's and early 1800's, States mainly chartered private toll and turnpike companies to construct, maintain and operate many of the major roads in this country. With competition from the railroads and a lack of profitability, many of the private toll companies went out of existence. By 1850, most roads were the responsibility of local governments.

In the early 1800's, the Federal government was involved in the construction of the National Pike. By 1838, the coming of the railroads discouraged further Federal appropriations for road building. Roads remained a local issue as most long distance travel was by the railroads.

Until the last decade of the nineteenth century, road construction was almost exclusively a function of local governments. As the use of the automobile became more general, the demand for more and better roads exceeded the ability of local governments to finance substantial road improvement programs. Road conditions were generally considered unsatisfactory and coordinated road systems had not been developed in any State.

Aware of the need for State action, New Jersey in 1891, Massachusetts in 1892, California and Connecticut in 1895 established what are considered the first State highway departments. The early highway departments acted mainly

in an advisory capacity and as a means of appropriating State-aid funds to counties for road construction. By 1915, most States had established highway departments or commissions.

In 1916, Congress passed the first Federal-aid highway act which made Federal financial assistance conditional to the States creating adequately staffed State highway departments which had the authority and resources to conduct a highway construction program. By 1917 all States had established a separate department of State government to handle a highway construction program on a full-time basis and were providing highway aid to local governments.

The progress that has been made in improving the Nation's highways since 1921 is the result of the combined efforts of the Federal, State, and local governments. Although Federal and State governments provide the major share of highway funds, local governments continue to spend substantial amounts for roads and streets that are under their jurisdiction.

The main source of road funds in the early decades of the 20th Century were property taxes and other general revenues supplemented by income from State and local highway bond issues. Vehicle registration fees were first levied by New York in 1901, and gasoline taxes by Oregon in 1919. By 1929, all States had levied a gasoline tax, and highway-user taxes became the predominant source of highway revenues.

### **Combined Finances**

Table HF-210 combines, for all levels of government, the disbursements for highways and the revenues used to fund those disbursements. The table classifies funds by revenue source and the government level responsible for providing those funds. Information is included on the gross collections and disposition of highway-user revenues. Funds paid as grants-in-aid from one government level to another or that are shared are shown as intergovernmental payments and are included in the disbursements shown for that level of government. Combined capital outlay and maintenance expenditures are shown by State and by year in tables HF-202C and HF-202M.

### **Evolution of the Federal-aid Program**

The first authorization of Federal funds for highways occurred in 1912 when Congress, in response to public demand for better roads, allocated \$500,000 for an experimental rural post-road program. In 1916, the Federal-Aid Road Act established on a continuing basis the present cooperative Federal-State highway program. To accelerate

Text Highway Finance

the improvement of roads, Congress in 1921 authorized designation of a system of principal and inter-county roads, which was referred to as the Federal-aid Primary System, and limited the system in any State to 7 percent of the total rural mileage then existing in the State. The use of Federal aid was restricted to that system and to rural mileage only. The Federal-aid Primary System was made up of roads that today would be functionally classified as arterials.

Federal activity was centered on improvement of the Federalaid system outside of cities until 1933 when, as an emergency measure, the program was broadened to include extensions of the Federal-aid system into and through municipalities. Urban highway improvement first came in for a specific share of Federal-aid funds in 1944 when Congress authorized the use of funds for Federal-aid highways in urban areas.

The 1944 act also provided for the designation of a Federalaid Secondary System and a National System of Interstate and Defense Highways. In 1990, legislation changed the name of the National System of Interstate and Defense Highways to "The Dwight D. Eisenhower System of Interstate and Defense Highways". The Federal-aid Secondary System was comprised of roads that would be functionally classified as major collectors.

The Federal-Aid Highway Act of 1956 and the companion Highway Revenue Act of 1956 further defined the purpose and extent of the Interstate System and, as subsequently amended, provided funds for its completion. Interstate System funds were matched on a 90 percent Federal to a 10 percent State matching basis except that the Federal share was increased in the proportion that Federal land area was to total area in a particular State. The law also provided that the Interstate System shall be included in the Federal-aid Primary System. The Interstate System connects, as directly as practicable, the Nation's principal metropolitan areas, cities, and industrial centers; serves the national defense, and connects at border points with routes of international importance.

The Federal-aid Urban System was first authorized by the Federal-Aid Highway Act of 1970. Its definition was modified by the Federal-Aid Highway Act of 1973. The system served major centers of activity and included high traffic volume arterial and collector routes, including access roads to airports and other transportation terminals, so as to serve the goals and objectives of the community.

Federal-aid Primary, Secondary, and Urban System funds were matched on a 75 percent Federal to a 25 percent State

matching basis except that the Federal share was increased in the proportion that Federal land area was to total area in a particular State. Beginning with FY 1973, part of the Urban System program was earmarked for urbanized areas with a population of 200,000 or more.

Prior to 1976, Federal funding had generally been limited to construction of roads on the Federal-aid system. By the mid 1970's, many highways had reached the end of their design life and the problem of deterioration was recognized. In the Federal-Aid Highway Act of 1976, a special category of Interstate funds was authorized specifically for resurfacing, restoration, and rehabilitation (3R) work. The Federal-Aid Highway Act of 1981 expanded the program to include reconstruction (4R), and funding was substantially increased.

The Surface Transportation Assistance Act of 1978 (STAA) amended the Primary and Secondary programs to require 3R type work. The STAA of 1982 added the fourth R (4R) and included the Urban System program. With the 3R/4R programs, a shift was taking place from new construction only to preserving and extending the service life of existing highways and bridges. Also during the 1970's and 1980's, other changes were occurring as new programs were authorized that were not for new roadway construction only on the Federal-aid system. Some of the new programs included: bridge preservation and reconstruction, Interstate substitution, 85 percent minimum allocation, and the highway safety construction. The matching ratios vary for each program.

The Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) eliminated the Federal-aid Primary, Secondary, and Urban systems and created the National Highway System (NHS). In November 1995, Congress enacted legislation establishing the NHS. The NHS includes the existing Interstate System routes, a large percentage of urban and rural principal arterials, the Strategic Highway Network, and major connectors. The interim NHS consisted of the Interstate System and other principal arterials.

Under the ISTEA, resurfacing, restoration and rehabilitation are funded under the Interstate Maintenance (IM) program. The Federal share of IM projects is 90 percent. Minimum allocation was changed to 90 percent and several other equity adjustment categories were added including the Donor State Bonus and 90 percent of Payment Adjustments.

The ISTEA created a new flexible funding program, the Surface Transportation Program (STP), that can be used for roads and streets not functionally classified as local or rural minor collector, for bridges on any public road, and for

Highway Finance Text

transit capital projects. The Congestion Mitigation and Air Quality (CMAQ) program is one of several new programs created by the ISTEA.

### **Federal Financing**

The Federal-aid highway program is financed from the proceeds of motor-fuel and other highway-related excise taxes deposited in the Federal Highway Trust Fund (HTF). The Federal-aid highway program is a federally assisted, State-administered program which distributes Federal funds to the States for the construction and improvement of urban and rural highway systems. On Federal-aid highway projects, a State develops the plans, lets the contracts, and supervises the construction. The roads remain under the administrative control of the State or local government responsible for their operation and maintenance.

### The Federal Highway Trust Fund

The Federal Highway Trust Fund (HTF) is the funding source for the Federal-aid highway program. The HTF was established by the Highway Revenue Act of 1956. The Department of Treasury, Internal Revenue Service, collects the Federal road-user taxes and deposits the revenues in the Federal Highway Trust Fund. Table FE-101 provides a historical summary of the Federal excise tax rates, including the rates currently in effect.

Effective April 1983, the Highway Revenue Act of 1982 created the Mass Transit Account within the Highway Trust Fund. The Act provided that the equivalent of one cent per gallon of the motor-fuel taxes would be deposited in the Mass Transit Account for transit system capital expenditures. Table FE-201 shows the Federal HTF amounts dedicated to the Mass Transit Account within the Highway Trust Fund.

Tables in the FE series do not include Federal fuel tax revenues that are not deposited in the Highway Trust Fund. For example, the current 4.3 cents per gallon portion of fuel taxes dedicated to deficit reduction are not included. The receipts from gasoline consumed in motorboats are currently transferred from the Highway Trust Fund to the Aquatic Resources Trust Fund and the Land and Water Conservation Fund, which fund programs of U.S. Department of the Interior and U.S. Coast Guard.

Federal Highway Trust Fund revenues are derived from various Federal excise taxes on highway users. The historic attribution of these revenues to highway users in each State is shown in table FE-209. Since these revenues cannot be directly related to payments by highway users in each State, the receipts attributable to highway users in each State are estimated by the FHWA based on highway fuel consumption.

### Federal Government Highway Finances

The terms commonly used in describing Federal-aid financing are authorization, apportionment, allocation, obligation, and expenditure. The initial step in the financing of Federal-aid highways is the congressional passage of a highway act. This legislation establishes the amount and purpose for which Federal-aid funds are to be expended, and the years of the authorization.

The apportionment of funds is the next step. This distributes the authorized funds among the various States in accordance with formulas that are defined in the latest highway act. Table FA-204 shows apportionments by major program type.

Allocations are the administrative distribution of funds that do not have a statuatory distribution formula, i.e., emergency relief.

States cannot draw on the apportioned amounts until they have been given authority to make the obligation. Apportioned funds are available for obligation for more than one year to permit States time for planning and budgeting. The availability period for the various Federal programs is specified in law.

An obligation is a commitment of the Federal Government to pay, through reimbursement to the States, the Federal share of a project's eligible cost. The commitment is made when the plans, specifications and estimate for the project is approved. In some years, Congress has imposed a ceiling on obligations to limit spending. Table FA-204B shows obligations.

As portions of a Federal-aid project are completed, FHWA reimburses the State for the Federal share of costs incurred. The cash reimbursement or expenditure of the Federal funds may stretch on for several years after a project has been approved and funds obligated. These expenditures are shown in table FA-203 and identified by major program. This table also includes direct expenditures by the FHWA on Federal lands and for other costs incurred by the FHWA in administering the Federal-aid program.

Other Federal agencies also expend funds on roads. Table FA-205 shows the amounts expended for public highways by Federal agency since 1921. Table FA-205A shows combined expenditures for those Federal agencies by type of highway expenditure.

### **Construction cost index**

Price trends in highway construction are recorded in table PT-201. This index covers three major construction cost

items: excavation, surfacing, and structures. The basic data for the index, are obtained from the contracts awarded for Federal-aid highway projects by the State highway departments. The indices shown in table PT-201 use 1987 quantities and prices as the base.

### **State Government Highway Finances**

Highway fiscal surveys were conducted by the Federal Government as early as 1904, but it was not until 1921 that annual, systematic surveys of the finances of State highway departments were initiated. Between 1921 and the present, the quality of the basic records from which the information is derived, as well as the practices of data gathering and data evaluation, has changed considerably.

Between 1921 and 1933, State highway finance data were reported on the various State fiscal year periods. From 1933 to the 1980's, these data were mainly compiled on a calendar year basis. From the mid 1980's, the States are returning to reporting on a State fiscal year basis. In 1937, a much broader and detailed classification of receipts and disbursements was adopted. In 1945, coverage was expanded to include finances of special toll facility authorities.

In compiling the summaries for an earlier version of this publication, the Federal Highway Administration staff reviewed historical data and adjusted that data to bring the pre 1945 statistical data of the States to the then current standards of classification and coverage. The present tables reflect the present standards of classification and coverage.

Table MF-203 summarizes the annual disposition of all motor-fuel tax revenues collected by the States for State highway purposes, local road and street purposes, the costs of collecting and administering road-user tax laws, and non-highway purposes. Table MV-203 shows similar information for motor-vehicle revenues. Table DF-200 combines information from tables MF-203 and MV-203.

The SF table series summarizes the annual highway finance activities of State governments. These tables include the highway-related revenues and expenditures of State and quasi-State operated toll facilities. Table SF-201 summarizes the sources of revenues used by the States to fund their highway programs. These sources include funds from the Federal and local governments.

The disbursements of States for highway programs and activities are summarized in table SF-202 by type of disbursement. Table SF-202C shows capital outlay by State. Capital outlay includes expenditures for right-of-way, engineering and construction. Table SF-202M shows

maintenance expenditures by State. Maintenance includes expenditures for physical maintenance and traffic services. Traffic services includes expenditures for snow removal and sanding, traffic control operations, and the operation of toll facilities.

Table SF-204 summarizes the annual disbursements for State-administered highways. Table SF-206 includes both direct expenditures by the States on local roads and streets and transfers to local agencies. Table SF-212 shows highway capital outlay by functional system for the States. Table SF-212A shows capital outlay by type of improvement.

The SB table series summarizes the annual status of highway debt and the highway debt transactions of the States and State toll facilities. Table SB-202 shows the annual indebtedness of the States. Table SB-202E shows the par value of obligations outstanding at the end of the year. Table SB-202I shows the par value of highway debt issued by the States.

Table SF-203B summarizes the annual financial transactions of State and quasi-State toll facilities.

### **Local Government Highway Finances**

The Federal Highway Administration in cooperation with the States began to compile comprehensive statistics of local government highway finances in 1937 by means of a canvass or selected sample of all local agency records. Later, to extend these summaries back to 1921, FHWA staff collected and analyzed many published and unpublished reports, and made some estimates to bridge substantial gaps in information.

Beginning in 1983, States had the option of reporting local government highway finance data on a biennial basis with FHWA staff estimating the year that data was not reported. About half of the States continued to report data on an annual basis. Some States use sampling and estimation to develop their local government highway finance data.

The annual highway finance activities of local governments are summarized in the LGF table series. These tables include data for toll facilities under the jurisdiction of local governments. Table LGF-201 shows the sources of revenues used by local governments in funding their road and street activities including funds provided by Federal and State governments. Table LGF-202 shows the types of highway disbursements that were made by local governments.

Table LGB-202 summarizes the annual status of local government highway debt and debt transactions.

Highway Finance Text

### **Information for Users**

Highway finance information in *Highway Statistics S* Table LGF-203B summarizes the receipts and disbursements of toll facilities under the jurisdiction of local governments. *ummary to 1995* is statistical in nature and does not represent an accounting or audit statement of State and local governments. The published highway finance information presents a general overview of the funding of highway programs, highway-user taxation and the disposition of highway-user revenues.

All reports and information provided to FHWA were examined for completeness, reasonable consistency with present and past data reporting, and with data reporting instructions contained in a *Guide To Reporting Highway Statistics or then current instructions*. The FHWA analysis process includes reclassification of State data to achieve greater consistency in the presentation of the data.

The reporting of information varies from State to State. How consistent States are in reporting data according to instructions contained in *A Guide To Reporting Highway Statistics* has an impact on the reliability of comparing the data of different States.

### Reporting period

Over the course of time, reporting periods have changed. Therefore, data shown for any particular year may actually represent a mix of data for calendar and fiscal years ending during the reporting period.

### **Interagency Coordination**

The information on State government highway finance is based on reports coordinated through State highway agencies. Data and report forms were and are prepared by State personnel in the State highway agency and in a variety of other State agencies that have highway functions, such as tax and revenue agencies, motor vehicle agencies, public utility commissions, public safety departments, and highway police organizations. The completeness and consistency of State government level data is dependent upon the degree of cooperation among State agencies.

Different State agencies have different accounting and information systems which can lead to timing differences in the recording of revenues and expenditures. Timing differences are most apparent in the transfer of funds among the State agencies responsible for collecting revenues and the State agencies responsible for expending those revenues.

The information on local government highway finance are based on reports coordinated through State highway agencies from data provided by local governments. Some State highway agencies develop their local highway finance reports, in part or whole, from central State sources that routinely collect local finance data through legislated local government reporting requirements.

### Jurisdictional responsibilities

Differences exist among States depending on the governmental level of responsibility for highway functions and the variation in agencies that perform the functions. Some States have jurisdictional authority over almost all highways in the State and perform almost all highway functions. In other States, local governments have jurisdictional authority over a significant portion of the highways. Comparisons are difficult to make among State governments which have vastly different highway responsibilities. Local government data also tend to vary among States depending upon the degree of local government responsibility for highways.

Some States share a significant amount of highway-user revenue with their local governments. Other States assist local governments by transferring other revenue or by performing direct work on local jurisdiction roads. States performing direct work on local roads tend to report higher levels of capital outlay, maintenance and administration for the amount of revenues raised.

### Financing mechanisms

Differences exist between States as to the types of revenues used in funding highways. State and local governments do not impose the same taxes and fees. The tax structure and distribution of tax revenues varies from State to State, and from local government to local government. These differences are often found in how States choose to finance their highway systems and in how States classify revenues.

For example, some States extend paying for a project into the future through bond financing. Large bond sales can greatly inflate the amount of revenue for highways in the year the bonds were sold, especially when total revenues are compared to prior and subsequent years. Similarly, total disbursements can vary greatly with the expenditure of the bond funds.

States which do not use bond financing pay for projects by either accumulating sufficient funds before beginning the project, or paying for the project from current revenues. Those States tend to have a more consistent level of revenues and disbursements than States which use bond financing.

Text Highway Finance

Another example involves toll financing. Not all States have toll facilities, and the size and financial scope of toll facilities varies significantly. A small toll facility may raise and spend a few thousand dollars a year. Some large toll facilities have cash flows of several hundred million dollars to over a billion dollars a year. Toll facilities can represent a significant portion of a State's highway revenues and expenditures. Toll facilities also represent a significant source of revenues for mass transit and other purposes.

### **Revenue Classification**

The classification of revenues varies from State to State. FHWA reclassifies some State revenue data to present tables with more uniform definitions. Revenues generated by taxes and fees that are specifically targeted at highway-users are classified as highway-user revenue.

Revenues whose origins were unidentified are typically classified as general funds. For example, when State highway agencies receive payments from other State agencies for expenditure on highways, it may not be possible to determine the original source of revenue of the transferred funds.

### **Expenditure Classification**

State accounting and information systems assign expenditures based on internal State categories and definitions. To develop their expenditure reports to FHWA, States modify their internal data to correspond to FHWA categories and definitions. The reliability of the reconfigured data is dependent on the detail present in existing State records, and the amount of variation between State and

FHWA definitions. One area in which States have difficulty in recompiling data is in defining types of capital improvements. Project records in some States do not contain a full breakdown of work types. This forces these States to manually assign projects to categories based on narrative descriptions of each project. Such narratives are of varying levels of detail and are subject to interpretation. This may cause data classification to be less consistent. States use a variety of definitions for capital outlay and physical maintenance. In some States, work performed by maintenance crews may be classified as physical maintenance, even if the project was extensive enough to meet the FHWA definition of capital outlay.

Another problem area is the assignment of indirect costs. FHWA requests that States assign incidental costs related to specific construction and maintenance projects to those categories. For example, salaries and benefits for engineers and construction workers detailed to a construction project should be assigned as construction expenditures. However, many State accounting systems do not assign costs in this manner. For example, salaries may be assigned to capital outlay while employee benefits may be assigned to general administration.

### **Trends**

Any examination of highway finance information needs to take into account the normal changes that occur because of changes in revenue policies, program emphasis or funding, e.g., tax rate increases or greater tax compliance, establishment of a State highway trust fund, reallocation of highway-user revenue distributions, or special construction programs.

1/ Data are for a variety of fiscal and calendar years. Some data reported in Summary to 1985 have been revised to conform more closely to current data definitions.

188

1,221

56,981

2/ Represents gross receipts from motor-fuel and vehicle taxes and tolls, less refunds and loss allowances.

1,033

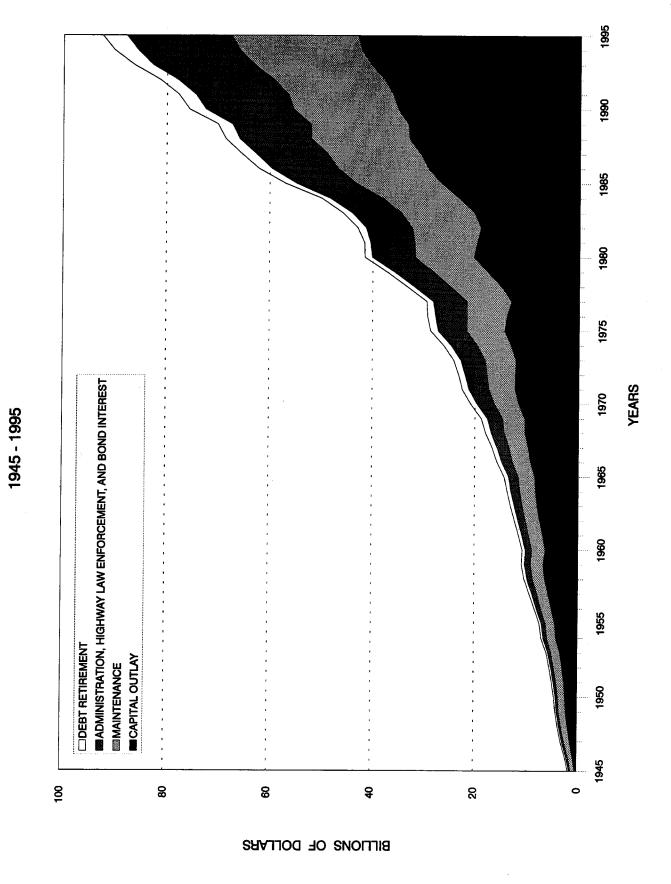

- 3/ Prior to 1974, State government distributions for mass transit were included under nonhighway purposes. Prior to 1979, data are not available on local government distributions for mass transit.
- 4/ Includes only those collection and administrative costs paid from motor-fuel and motor-vehicle tax receipts.
  Operational costs of toll facilities are reported as traffic services. Federal collection expenses are excluded since they are paid for by the General Fund. Data for local government expenses are not available.
- 5/ Amounts shown represent receipts of the Highway Trust Fund that were used for Federal payments to territories, and Federal expenditures in territories for highways. Territories' funding for highways are excluded from the receipts and disbursement shown.
  - 6/ Proceeds and redemptions of short-term notes and refunding issues are excluded.
  - 7/ Negative numbers indicate that funds were placed in reserves.
- 8/ The Federal amounts for 1956 reflect general fund expenditures on a calendar year basis, most of which occurred prior to the creation of the Highway Trust Fund on July 1. Amounts expended from the Highway Trust Fund are reported on a fiscal year basis beginning in 1957.
- 9/ Highway Trust Fund Highway Account data are based on the Federal fiscal year. The data reported in "Highway Statistics Summary to 1985" were on a calendar year basis.
- 10/ Includes the Mass Transit Account of the Highway Trust Fund. Also includes Federal Highway Administration activities funded by general funds and all other agencies and funds that make appropriations for highways or that receive highway-user revenues.
- 11/ The Highway Trust Fund data for 1976 includes revenues and expenditures for the period July 1, 1975, to September 30, 1976. This was a result of a change in the Federal fiscal year.

1/ The focus of this table is on the Federal taxes on motor fuels used on highways. The detail provided for other uses is incomplete. Most of the revenue raised by the taxes described is dedicated to the Federal Highway Trust Fund for the financing of highway and transit programs.

2/ Includes the product commonly or commercially known or sold as gasoline and sultable for use as a motor fuel with an octane level of at least 75. Compressed natural gas is not included. The gasoline tax applies to all fuel volume imported or produced. Beginning January 1, 1956, the entire tax became refundable for gasoline used for farming. For gasoline, 1 cent of the 3-cent and 2 cents of the 4-cent tax were refunded for other nonhighway uses, through December 31, 1978, and for gasoline used by certain local transit systems through November 30, 1978. Gasoline used by State and local governments and nonprofit educational institutions is not taxed or tax is refunded if paid.

3/ Until April 1, 1983, the tax applies to all diesel fuel used in a highway vehicle registered for highway use. Diesel fuel used in a nonregistered highway vehicle is taxed at 2 cents per gallon through March 31, 1983. Two cents of the 4-cent tax is refundable for diesel fuel used by certain local transit systems through November 30, 1978. Effective April 1, 1983, the tax is imposed on any liquid suitable for use as a fuel in a diesel-powered vehicle or train, but off-highway business use is exempt. Diesel fuel used for farming is not taxed, or if the tax has been paid, it is fully refundable. Diesel fuel used by State and local governments and nonprofit educational institutions is not taxed or tax is refunded if paid.

4) Special fuels include liquefied petroleum gases (propane, butane), benzol, benzene, and naphtha and other liquid (except gasoline, gasohoi, and dlesel fuel otherwise taxable, kerosene, gas oll or fuel oll) when used in a taxable way. The rates shown are for propane, the most commonly used special fuel. Through March 31, 1983, the tax applies to all special fuels used in a highway vehicle registered for highway use. Special fuel used in a nonregistered highway vehicle, motorboat or airplane is taxed at 2 cents per gallon through March 31, 1983. Two cents of the 4-cent tax is refundable for special fuel used by certain local transit systems through November 30, 1978. Effective April 1, 1983, the tax applies to special fuel used in a motor vehicle or motorboat. Special fuel used for farming is not taxed, or if the tax has been poid, it is fully refundable. Special fuel used by State and local governments and nonprofit educational institutions is not taxed or tax is refunded if paid. Effective January 1, 1979 through March 31, 1983, only off-highway business use (rather than other off-highway uses) is subject to the 2-cent exemption.

5/ The tax originally applied to all lubricating oil regardless of use.

6/ Gasohol was not defined in Federal tax law until January 1, 1979. The products later defined as gasohol were taxable, to the extent they existed, under the provisions of the gasoline tax. Effective January 1, 1979, gasohol was defined to be a blend of gasoline and at least 10 percent (by volume) alcohol, excluding alcohol made from petroleum, natural gas or coal. As so defined, gasohol is exempt from taxation from January 1, 1979 through March 31, 1983.

7/ Cutting oil is exempt from stated taxes. The entire tax on other judicating oil pecurine rejunification from the general public for compensation on scheduled.

8/ Effective December 1, 1978, school buses along with intercity and local buses used to transport the general public for compensation on scheduled.

1. 1984, school buses along with intercity and local buses used to transport the general public for compensation on scheduled. routes (or 20 or more passenger buses on nonscheduled routes) are exempt from the stated taxes for motor fuel and lubricating oil. Effective August 1, 1984, the exemption for diesel and special fuel used by these buses is 3 cents per gallon less than the prevailing rate unless used by qualified local buses which are fully exempt.

9/ Effective January 1, 1979 through March 31, 1983, the 2-cent refund or credit for nonhighway gasoline use is permitted only for off-highway business use; special fuel is taxed at the full rate except tax is 2 cents for off-highway business use, and the tax on lubricating oil is refundable only for off-highway use. Effective January 1, 1979 through December 31, 1982 the tax paid on motor fuel used in certain taxicabs is fully refundable.

10/ The diesel fuel tax is imposed on any liquid suitable for use as a fuel in a diesel-powered vehicle or train. Off-highway business use is exempt from stated taxes. Effective January 1, 1983 through September 30, 1988, a 4-cent refund can be claimed for certain taxicab use.

11/ After January 1, 1985 and before August 21, 1996, a one-time diesel differential payment is made to the original purchaser of a diesel automobile of \$102, and of a diesel truck or van, 10,000 pounds gross weight or less, \$198. The payment decreases by one-sixth for each prior model year vehicle and is not made for 1978 or earlier model year vehicles.

12/ Includes 0.1 cent per gallon tax dedicated to the Leaking Underground Storage Tank Trust Fund effective January 1, 1987. Collection of the tax was suspended for the period September 1, 1990 through December 1, 1990.

13/ Includes 2.5 cents per gallon tax for deficit reduction.

14/ Where two rates are shown, the first is for ethanol blends and second is for methanol blends. Effective January 1, 1993, the definition of assohol is expanded. The original definition is retained and called 10 percent gasohol and continues to be taxed at the rates shown. Blends with at least 7.7 percent alcohol but less than 10 percent are taxed at 9.942 cents and 9.48 cents. Blends with at least 5.7 percent alcohol but less than 7.7 percent are taxed at 11.022 cents and 10.68 cents. Effective October 1, 1993, the rates for 7.7 percent gasohol are 14.242 cents and 13.78 cents respectively for ethanol blends and methanol blends; the rates for 5.7 percent gasohol are 15.322 cents and 14.98 cents. Effective January 1, 1996, the rates for 7.7 percent gasohol are 14.142 and 13.68 cents respectively for ethanol and methanol blends; the rates for 5.7 percent gasohol are 15.222 and 14.88 cents

15/ Includes 6.8 cents per gation for deficit reduction. Effective October 1, 1995, 2.5 cents of the 6.8 cents is dedicated to the Federal Highway Trust Fund. The remaining 4.3-cent levy does not expire.

16/ Until October 1, 1993, compressed natural gas is not taxed. Thereafter it is taxed at 48.54 cents per thousand cubic feet for deficit reduction.

17/ The remaining 4.3-cent levy for deficit reduction does not terminate.

<sup>1/</sup> All amounts are net after payment of refunds and transfers. See tables FE-101A and FE-101B for explanation of the various taxes deposited in the Trust Fund.
2/ Totals may not equal sum of parts due to independent rounding.
3/ Includes the transition quarter. The transition quarter includes the months of July, August, and September 1976.
4/ Effective April 1, 1983, 1 cent per gallon of the motor-fuel tax is deposited in the Mass Transit Account within the Federal Highway Trust Fund. Effective December 1, 1990, the deposit is raised to 1.5 cents per gallon.
5/ Includes refunds of repealed taxes on inner tubes, tread rubber, lubricating oil, and truck parts and accessories.

<sup>3/</sup> Prior to 1974, funds distributed for mass transportation were included under nonhighway purposes.
4/ State and local nonhighway purposes not separable before 1925. Direct expenditures on local roads and transfers for local roads and streets are not separable before 1959.

Page IV-65

<sup>2/</sup> Debt service of obligations for local roads is included as direct expenditures, beginning in 1962.

<sup>1/</sup> Prior to 1963, data for engineering included as construction.
2/ Highway law enforcement and safety expenditures were included as administration prior to 1959 for counties, and 1937 for cities.
3/ Prior to 1990, includes retirement of short term debt (notes).

# CHANGE IN INDEBTEDNESS OF LOCAL GOVERNMENT HIGHWAY OBLIGATIONS, 1937-1994

## Section IV

## ROADWAY EXTENT, CHARACTERISTICS, AND PERFORMANCE

This section contains data on the physical, operational, usage, extent, and performance characteristics of public roads existing in the United States as of December 31,1995. Most of the historical information provides trends back to 1980, but some tables include data as far back as 1900.

### **DATA REPORTING**

The current data (1980 and forward) are based on the Highway Performance Monitoring System (HPMS). The HPMS comprises a combination of sample data on the condition, use, performance and physical characteristics of facilities functionally classified as arterials and collectors (except the rural minor collector system starting in 1993); certain additional condition and use data for all rural arterials and urban principal arterials; and system-type data for all public road and street facilities within each State. These data are reported by the States on an annual basis. In some years some States have failed to provide complete data. Footnotes have been included where appropriate to explain where data have been estimated from other available data.

Prior to 1980, other methods plus special national studies were used to obtain road and street information from the States.

### ORGANIZATION OF TABLES

All of the tables in this publication are national summaries. State breakdowns of the same data (often more detailed) are available electronically via the FHWA web site, back to 1980 for most tables.

Almost all tables in this section contain rural and urban breakouts where urban indicates a population of 5,000 or more. Small urban areas contain 5,000 to 49,999 persons while an urbanized area is an area with 50,000 or more persons that encompasses the land area delineated by the Bureau of the Census at a minimum. The Bureau of the Census establishes urbanized area boundaries based on the density of the population (1,000 persons per square mile). The adjusted Census urbanized area boundary reflected in this publication is usually enlarged to include such additional areas as airports, satellite cities/towns, strip development adjacent to high-use roadways, and other areas and facilities that are important to or serve the urbanized area. In some cases, the adjusted urbanized area includes land that will become urban in some predetermined amount of time (such as 3-5 years). These boundaries are decided upon by State and local officials with the approval of the FHWA and are the ones upon which the urban notation in this publication is based.

Prior to 1980, the urban portion of the tables generally contains mileage and travel reported as being municipal.

Within the two major breakouts--Highway Mileage and Highway Usage and Performance--the tables in this section have been organized into four general data areas:

- Public Road and Street Mileage tables HM-210, HM-212, HM-214, HM-215, HM-220 and HM-251.
- Travel tables VM-201, VM-201A, VM-202, and VM-203.
- Motor Vehicle Crashes tables FI-200, FI-210, FI-211, FI-220 and FI-221.
- U.S. Territories table R-200.

### PUBLIC ROAD AND STREET MILEAGE

For the most recent years (1980 forward), all mileage tables in this publication include only "public road" mileage (23 United States Code 101) meaning any road or street under the jurisdiction of and maintained by a public authority and open to public travel. Table HM-210 contains the total public road mileage of roads and streets in the United States, classified by jurisdiction. Table HM-212 contains mileage by type of surface as does HM-251 with further breakdowns by functional system. Table HM-214 contains Federal-aid mileage classified by jurisdiction. Table HM-215 contains mileage of Federal-aid highways and is in the same format as its companion travel table, VM-203. Table HM-220 contains all public road mileage by functional system. This table is in the same format as table VM-202 and contains the mileage that corresponds to the travel contained in that table.

Prior to 1980 the mileage tables include some nonpublic and/or not-open-to-traffic roadways. In 1979, this accounted for about 95,000 miles, nationwide.

In the more recent years, the annual increases in total road and street mileage by construction are relatively small. Most construction is for the improvement of existing highways and streets, such as resurfacing those previously surfaced, widening facilities, reducing grades, minimizing curves, eliminating grade crossings, and other improvements that provide safer, more efficient public roads having greater traffic and load-bearing capacities. Most new mileage falls in the local functional system category that serves residential or business uses. Decreases in public road mileage do occur. In recent

### **Text**

years, this has been due to the removal of some timber, forest access, and natural resource roads from general public use.

Roads in Federal forests and reservations may be part of the State and local jurisdictional systems and are included with the mileages reported for those systems. Mileage directly under Federal control is identified in tables HM-210 and HM-214.

## **Surface Types**

The surface classifications used in the national summary tables, HM-212 and HM-251 identify only the visible surface types on existing streets and roadways. Many highways, either by original design or because of reconstruction, consists of more than one major type of construction material. No data relative to vertical composition are presented, except for the composite pavement type (starting in 1988) on the electronically available State tables where the reporting agency has indicated that a concrete roadway has been overlaid with one or more inches of compacted bituminous material.

## Federal-aid Highway Mileage

Except for minor amounts of Federal highway mileage under the U.S. Forest Service, Bureau of Land Management, Bureau of Indian Affairs, National Park Service, Fish and Wildlife Service, and the military, practically all of the roads and streets in the United States are under the jurisdiction of State and local governments. The Federal-aid highways are, basically, segments of State and local system mileage eligible for Federal aid. Except under special circumstances, this excludes roads that are functionally classified as rural minor collector or rural and urban local.

The designation of a road or street as a Federal-aid highway does not alter its ownership or jurisdiction as a State or county road or city street. A Federal-aid highway simply means that, because of its service value and importance, it has been made eligible for Federal-aid construction and rehabilitation funds.

The Intermodal Surface Transportation Efficiency Act (ISTEA) of 1991 eliminated the historical Federal-aid Systems and created the National Highway System (NHS) and other Federal-aid highway categories. The National Highway System Designation Act of 1995 approved the NHS established under ISTEA. (For purposes of this publication, the NHS excludes any nonroadway routes, i.e., ferry boat routes.) Highways designated as parts of the Interstate System are included in the NHS.

All historical tables linked to the superseded Federal-aid Systems have been changed to reflect the NHS and other Federal-aid highways, as applicable. The changes are particularly evident in the Federal-aid tables starting in 1992. These

## Roadway Extent, Characteristics, and Performance

include tables HM-214, HM-215, VM-203, and portions of the FI series.

## **Interstate System**

The Eisenhower National System of Interstate and Defense Highways was originally established by the Federal-Aid Highway Act of 1944. The Federal-Aid Highway Act of 1956 and the companion Highway Revenue Act of 1956 further defined the purpose and extent of the system and, as subsequently amended, dedicated a group of Federal excise taxes on motor fuel and automotive products to the support of Federalaid highway activities. By law, the Interstate System is limited to 42,500 miles under Section 103 of Title 23 and other routes incorporated under Section 139(a) of Title 23 that are logical additions or connections and meet Interstate System design standards. The Interstate System under Section 139(c) is limited only to Alaska and Puerto Rico. Highways may also be designated as part of the Interstate System under provisions of Section 1105(e) of ISTEA as amended under Section 332 of the National Highway System Designation Act of 1995.

The Interstate System in conjunction with the rest of the National Highway System connects, as directly as practicable, the Nation's principal metropolitan areas, cities, transit facilities and industrial centers; serves the national defense; and connects at suitable border points with routes of continental importance.

## FUNCTIONAL SYSTEM MILEAGE

The functional systems result from the assignment of streets and highways into groups according to the character of service they are intended to provide. Because most travel involves movement through a network of roads, individual roads and streets do not serve travel independently in any major way. Functional classification defines the role that a particular road or street plays in serving the flow of trips through a highway network. The functional systems are: (1) arterial highways, which generally handle the long trips, (2) collector facilities, which collect and disperse traffic between the arterials and the lower level, and (3) local roads and streets, which serve the land access function to the residential areas, businesses, individual farms and ranches, and other local areas. The functional system data are identified in tables HM-212 (electronic versions only), HM-220, HM-251, VM-202, FI-220 and FI-221.

Because the principal arterial functional classifications for both rural and urban include a separate category for Interstate, the Interstate functional classification is the only stratification where there is direct correspondence with a Federal-aid system category. Interstate mileage, travel and crash information have been included in both the Federal-aid and functional

## Roadway Extent, Characteristics, and Performance

system tables. Although this is a duplication, it is necessary to provide complete summaries of both system types.

## **TRAVEL**

Table VM-201 contains estimates of annual vehicle distance traveled in miles by vehicle type and highway category. Beginning in 1966, separate totals are shown for urban and rural Interstate highways. Table VM-201A contains totals related to vehicle registrations and fuel use.

Table VM-202 contains a summary of the States' estimated highway travel based on traffic counts taken along selected highway sections which are grouped into functional systems, according to the character of service they provide. It is a companion to table HM-220.

Table VM-203 contains the estimated highway travel carried by Federal-aid highways. It is a direct companion to the mileage table HM-215 starting in 1980. Prior to 1980, table VM-203 reflects actual Interstate roadways that were open to public travel rather than the traveled way portrayed in the mileage table, HM-215; other Federal-aid systems are more directly relatable.

## MOTOR VEHICLE CRASHES

The FI series contains the total persons fatally and nonfatally injured in motor vehicle crashes on the Nation's highways. Table FI-200 contains total public road mileage, estimated annual vehicle-miles of travel, total persons fatally injured

plus annual rates for mileage, travel, registered vehicles and licensed drivers. Tables FI-210 and FI-220 contain total persons fatally injured on Federal-aid highways and on the functional systems, respectively; these tables are in the same format as the travel tables VM-203 and VM-202, respectively, and the mileage tables HM-215 and HM-220, respectively. Tables FI-211 and FI-221 contain total persons nonfatally injured on Federal-aid highways and on the functional systems, respectively; these tables are also in the same format as the travel and mileage tables noted above.

Starting in 1976 fatality data are based on the 30-day definition; a fatality resulting from a highway vehicular crash is to be counted only if death occurs within 30 days of the crash. Prior to 1976, fatality data included persons counted under State rules that varied from within 30 days to as long as one or two years after the crash.

### **U.S. TERRITORIES**

Table R-200 contains information for the U.S. territories including the Caribbean areas of Puerto Rico and the Virgin Islands, and the Pacific areas of American Samoa, Guam and the Northern Mariana Islands. The information for each area includes motor vehicle registrations, motor fuel consumption, resident population, licensed drivers, public road mileage, highway vehicular travel and persons fatally and nonfatally injured in highway vehicular crashes. The tables are based on data provided by the territories and although there are many missing entries, it is the most comprehensive summary of such information available.

<sup>1/</sup> Prior to 1980, some miles of non-public roadways are included.

<sup>2/</sup> Includes the 50 States and the District of Columbia.

<sup>3/</sup> Some years contain FHWA estimates for some States.

<sup>4/</sup> Paved mileage includes the following categories: Low Type, an earth, gravel, or stone roadway which has a bituminous surface course less than 1" thick—suitable for occasional heavy loads; intermediate Type, a mixed bituminous or bituminous penetration road on a flexible base having a combined surface and base thickness of less than 7"; High-Type Flexible, a mixed bituminous or bituminous penetration roadway on a flexible base having a combined surface and base thickness of 7" or more—also includes brick, block, or combination roadways after 1979; High-Type Composite, (Included with High Type Flexible), a mixed bituminous or bituminous penetration roadway of more than 1" compacted material on a rigid base with a combined surface and base thickness of 7" or more; High-Type Rigid, a Portland Cement Concrete roadway with or without a bituminous wearing surface of less than 1", includes brick, block or combination roadways prior to 1980.

part of the State and local highway systems. Prior to 1980, State park, Mileage in Federal parks, forests, and reservations that are not

forest and reservation roads were included

Includes State park, State toll, and

Some years contain FHWA estimates for some States. Reflects State highway agency roadways prior to 1980.

and other State agency roadways after 1979,

Includes the States and the District of Columbia

Some years contain FHWA estimates for some States. 3 5

roadway on a flexible base having a combined surface and base thickness of 7" or more—also includes brick, block, or combination roadways; High-Type Composite, (included with High Type Flexible), a mixed bituminous or bituminous penetration roadway of more than 1" compacted material on a rigid base with a combined surface and base thickness of 7" or more; High-Type Rigid, a Portiand Cement Concrete roadway with or without Paved mileage includes the following categories: Low Type, an earth, gravel, or stone roadway which has a bituminous surface course less than 1" thick—suitable for occasional heavy loads; intermediate lype, a mixed bituminous or bituminous peneitration roadway on a flexible base having a combined surface and base thickness of less than 7"; High Type Flexible, a mixed bituminous or bituminous peneitration

a bituminous wearing surface of less than 1".

4/ Starting in 1993 only major collector is included in the rural collector category.

Federal Highway Administration (FHWA), Estimation procedures include use of the 1992 Census of Introduction fluck Inventory and Use Survey (Illus) and indicated analysis of light fluck inventory on the Survey of Inclusion procedures include use of the 1992 Census of Introduction fluck Inventory and Use Survey (Illus) and indicated prosenger vehicles. While that include the not passenger cars. These include vons, pickup trucks, and sportfulling vehicles are defined and state fuel fox fows.

I also the FHWA using the Read vehicles that sportfulling vehicles are defined from state fuel fox fows.

I also the FHWA using the Read vehicles are defined from the 1992 IIUs and other sources.
